doi:10.1038/nrd838

Surface Plasmon Resonance sensing

$$k_{\text{spp}} = k_0 \sqrt{\frac{\epsilon_d \epsilon_m}{\epsilon_d + \epsilon_m}} \\ = k_0 n \sin(\theta)$$

State-of-the-art:

$\sim 10^{-7} \text{ RIU}^{-1}$

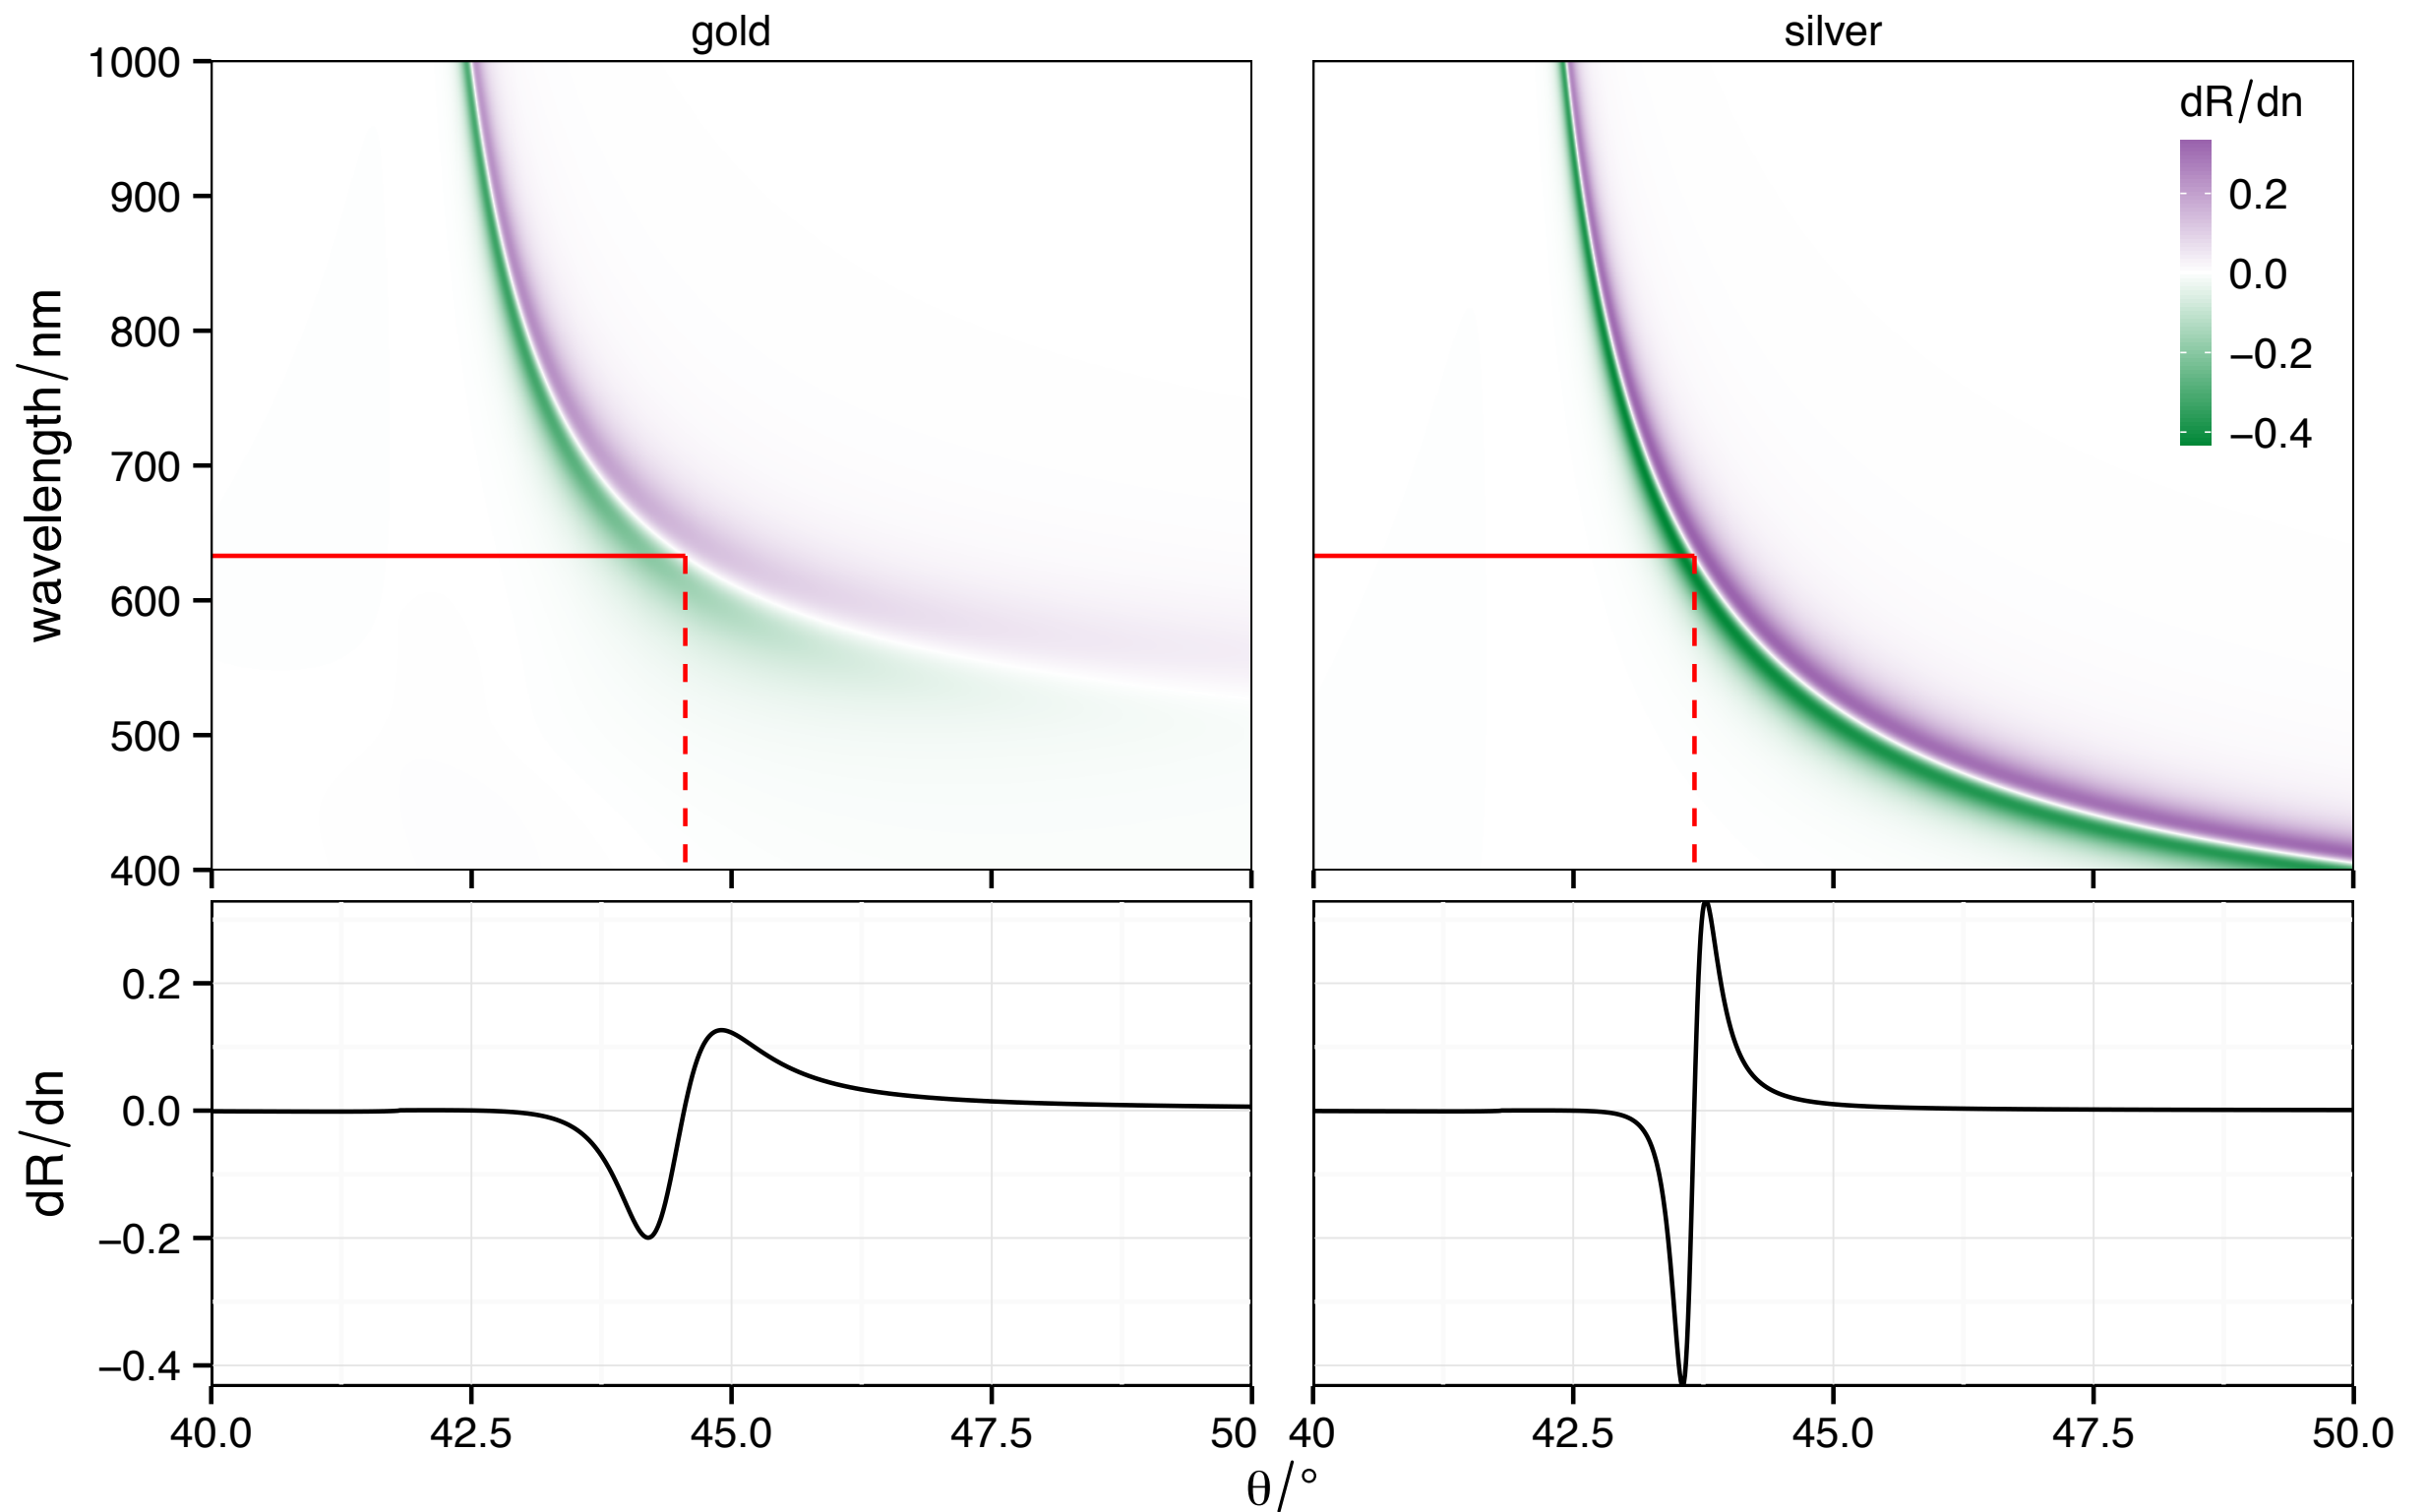

$\sim 0.1 \text{ ng / ml}$

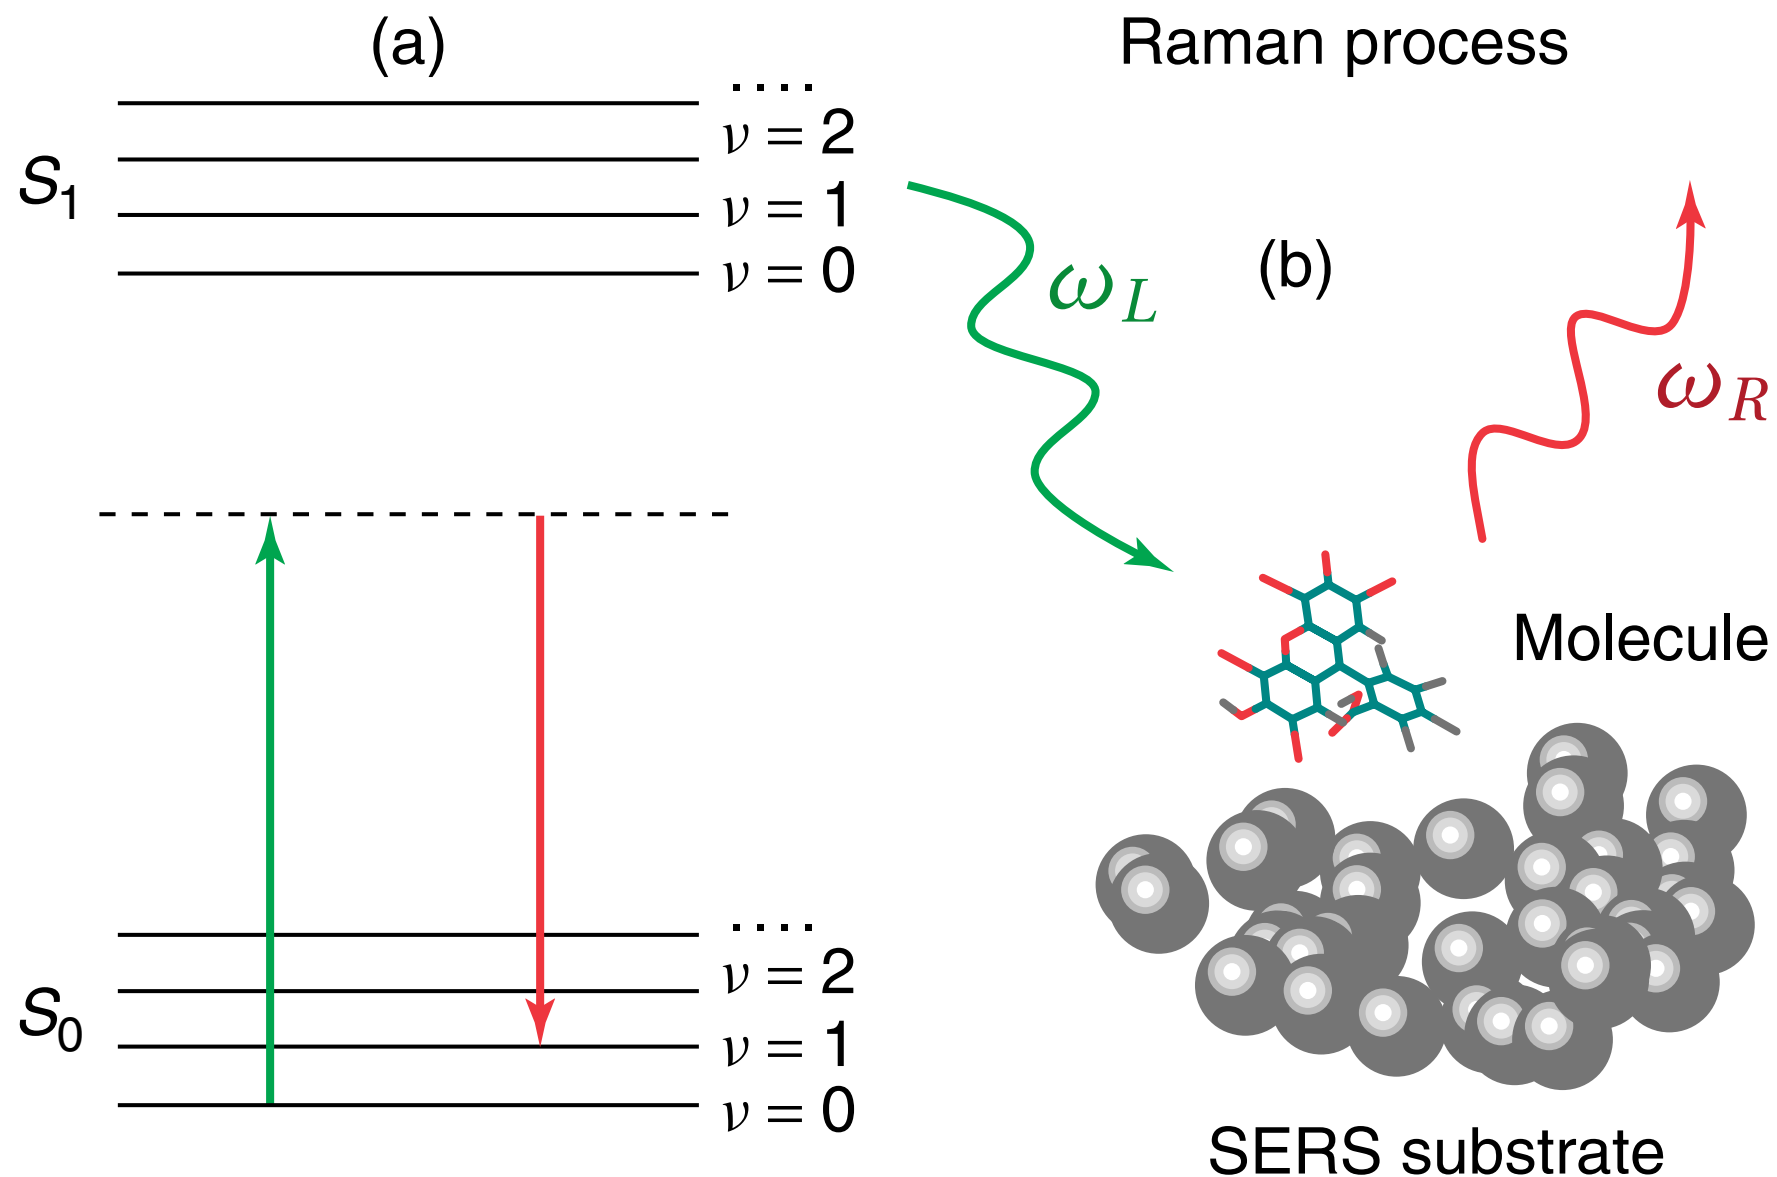

SPP dispersion

Sensitivity to refractive index change

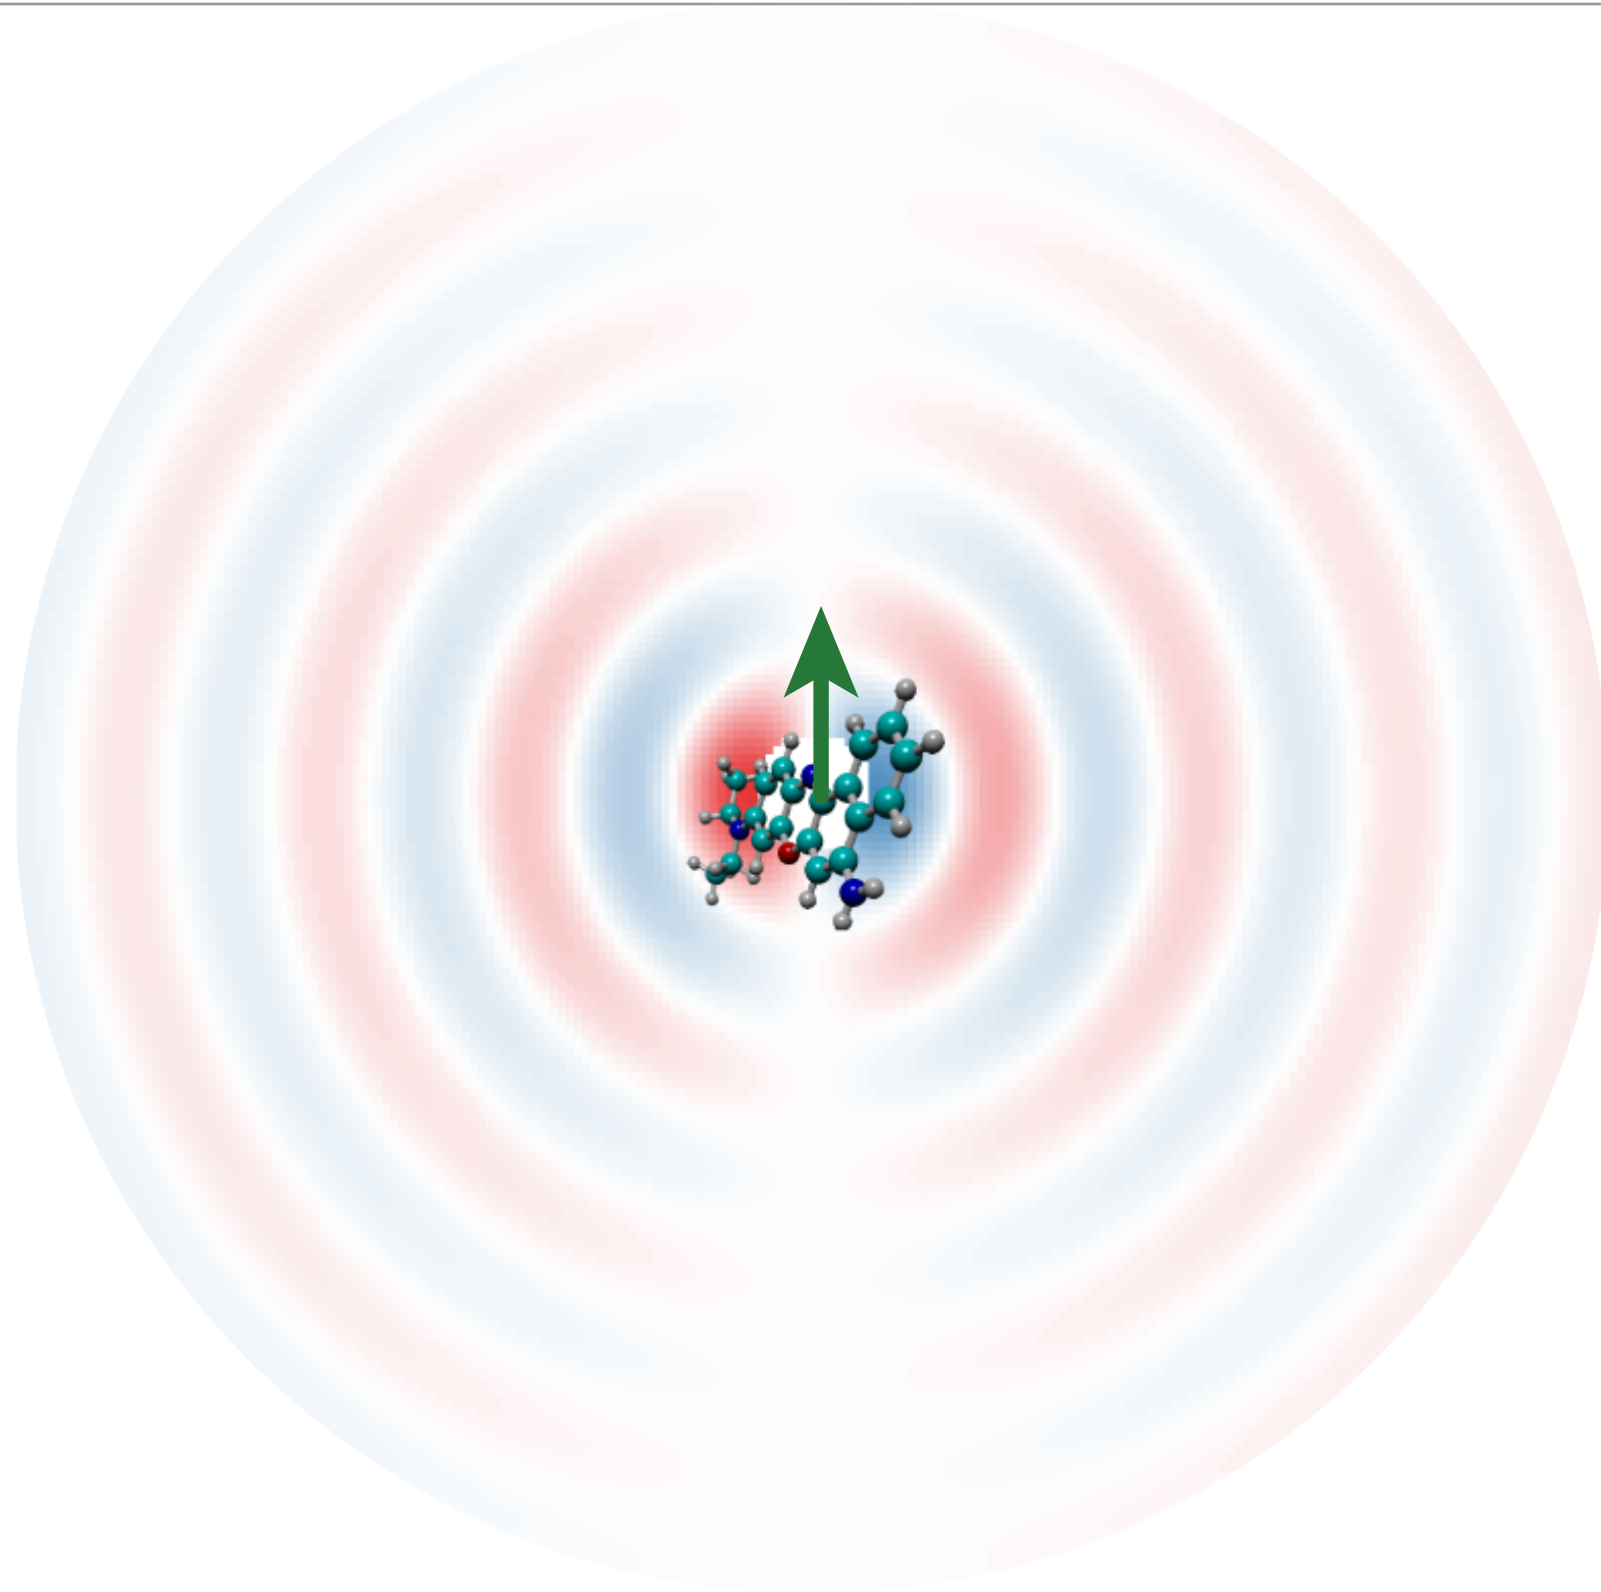

(Surface-Enhanced) Raman Scattering

$$\text{Enhancement} \propto |E(\omega_L)|^2 |E(\omega_R)|^2$$

typically $\sim 10^4 - 10^9$

Dipole emission

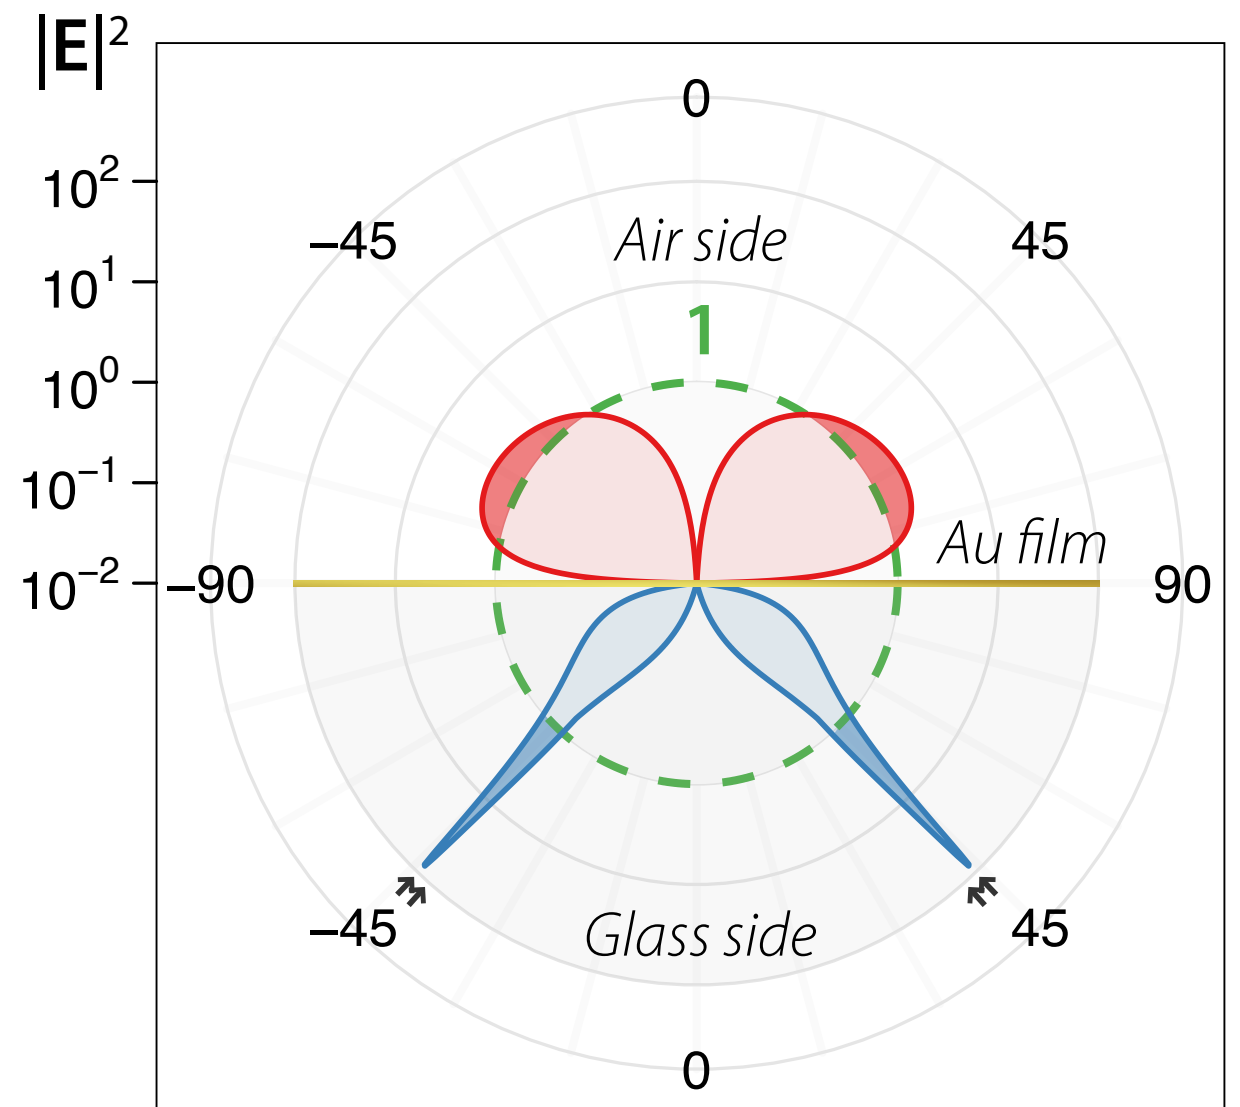

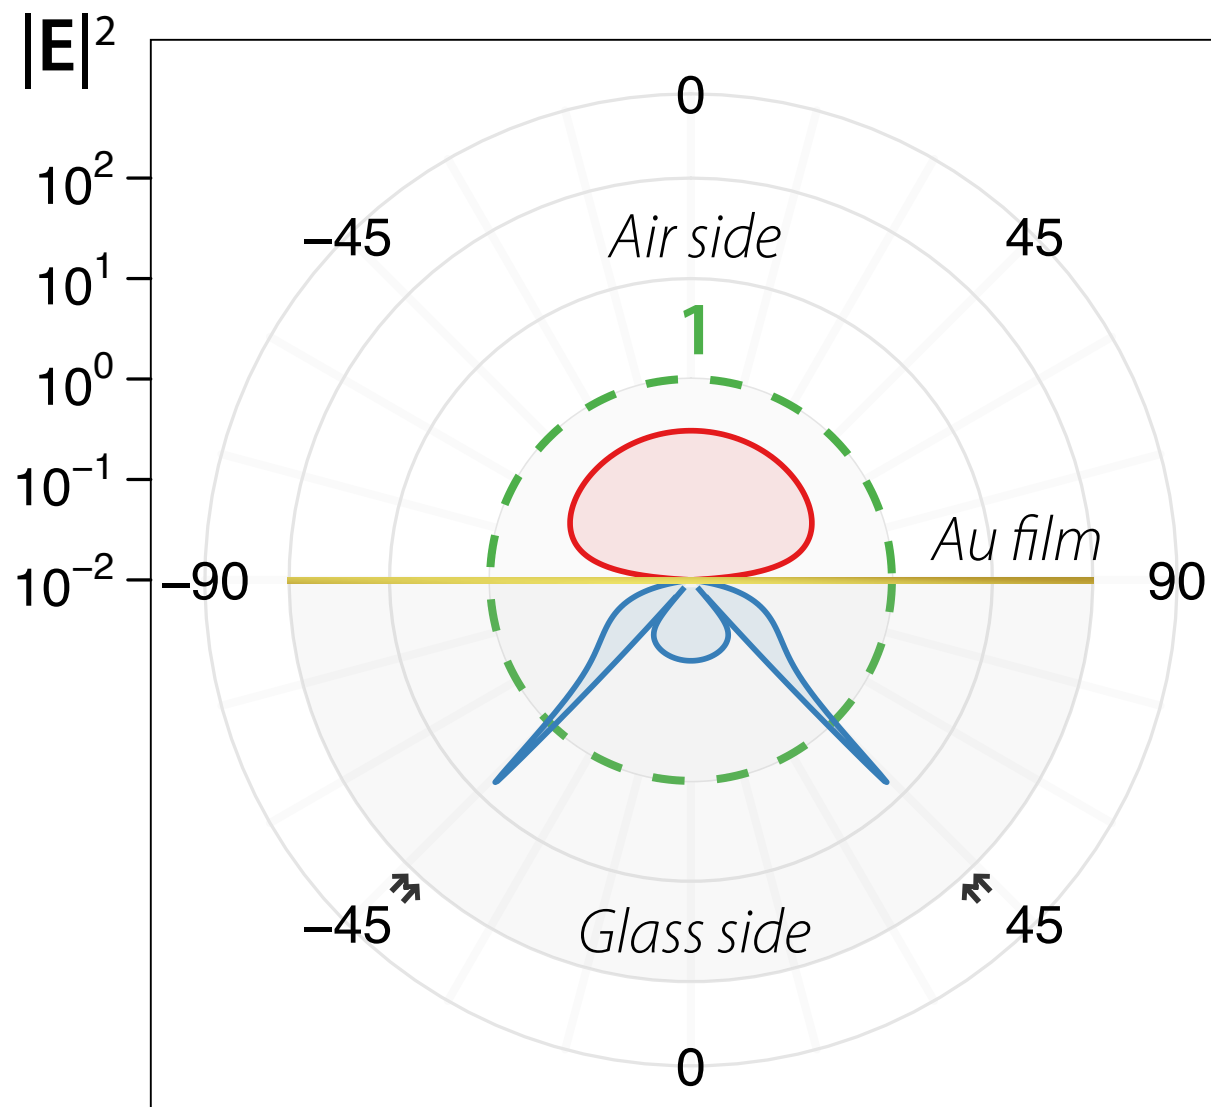

Dipole near a SPR substrate

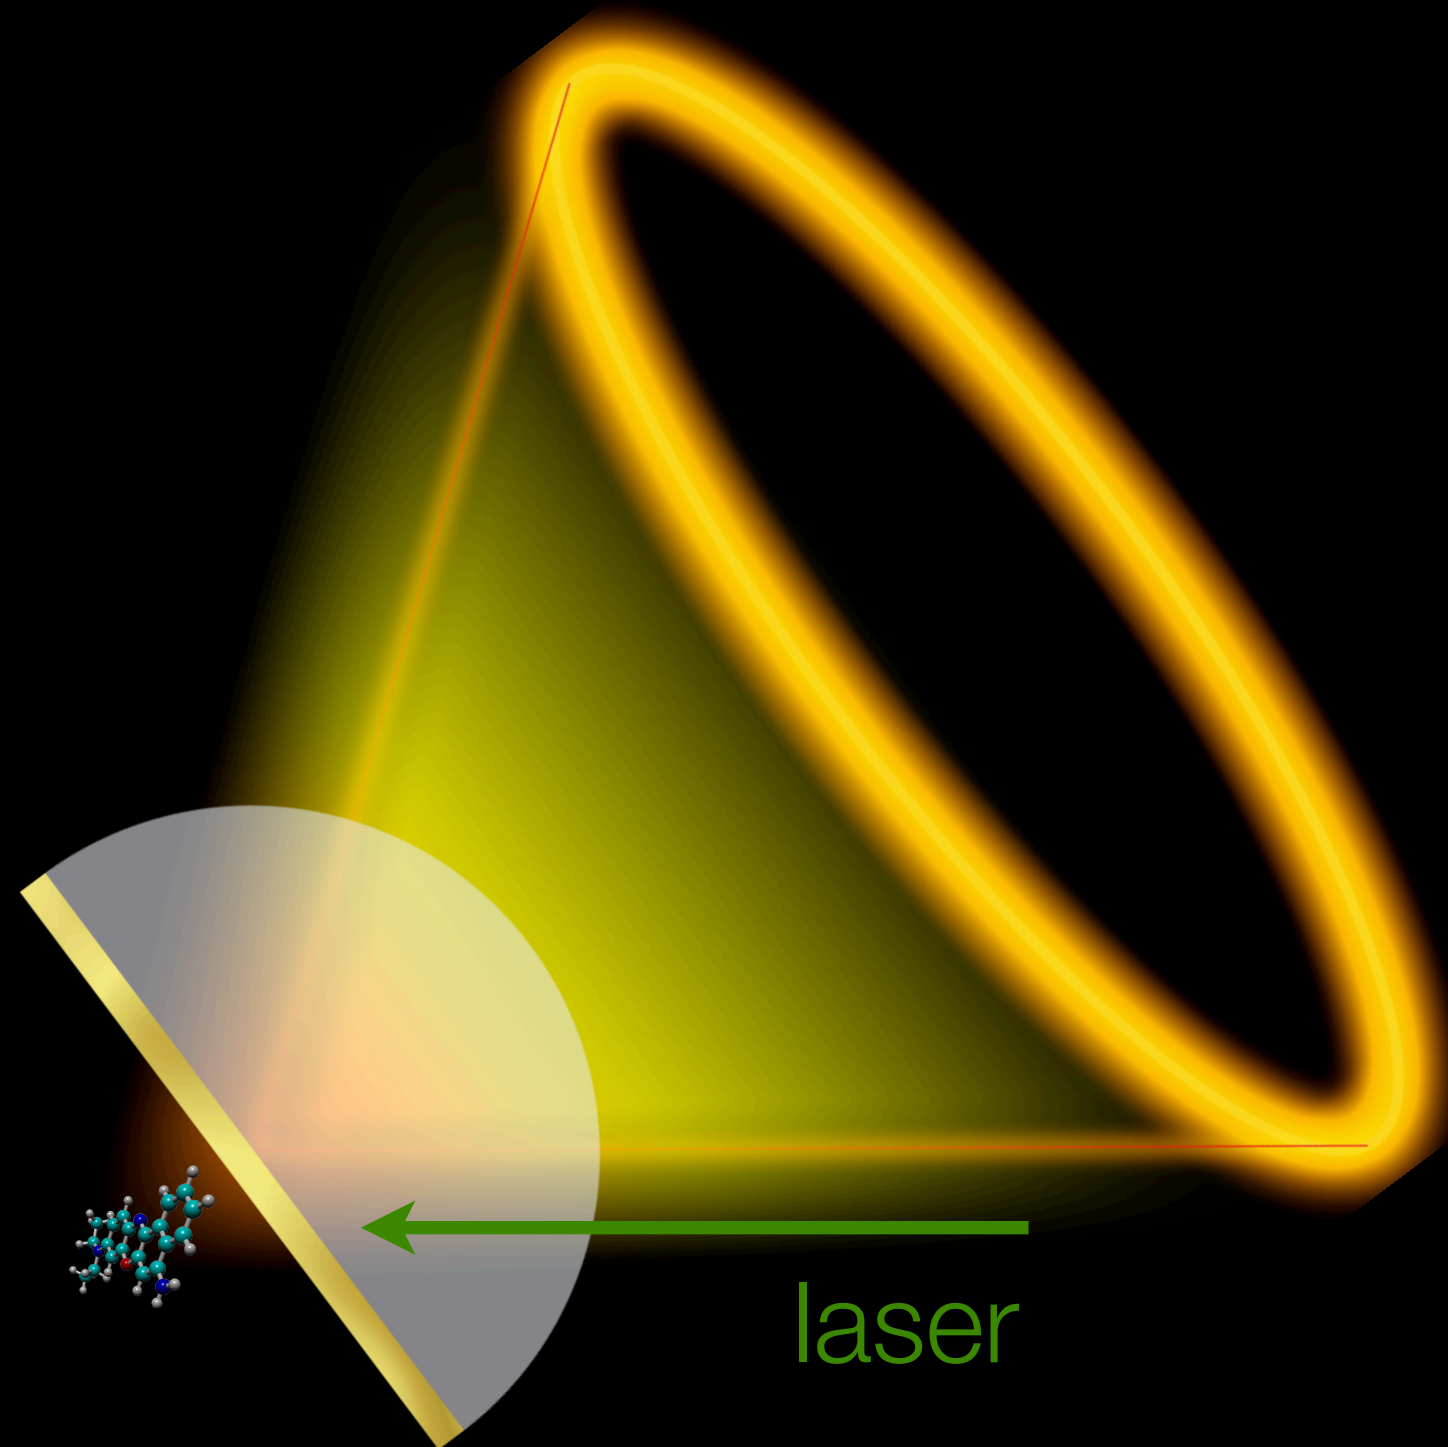

vacuum

substrate

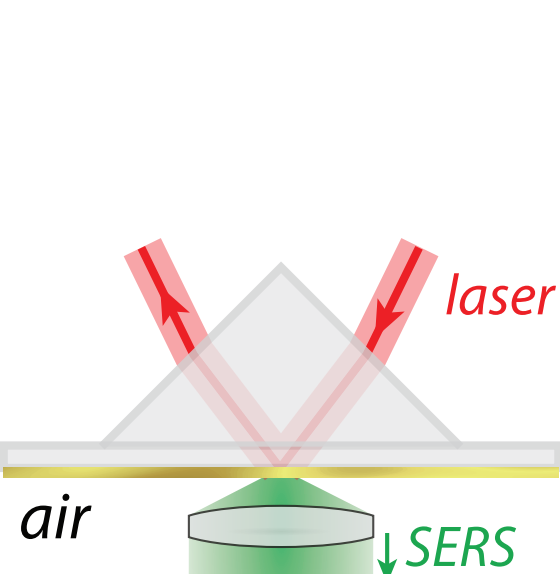

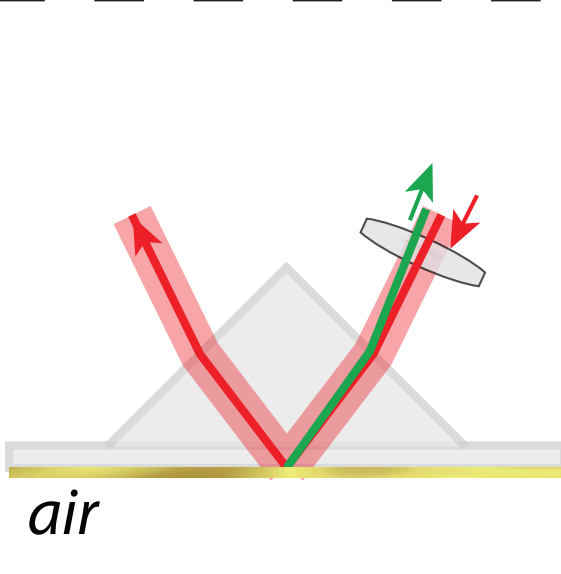

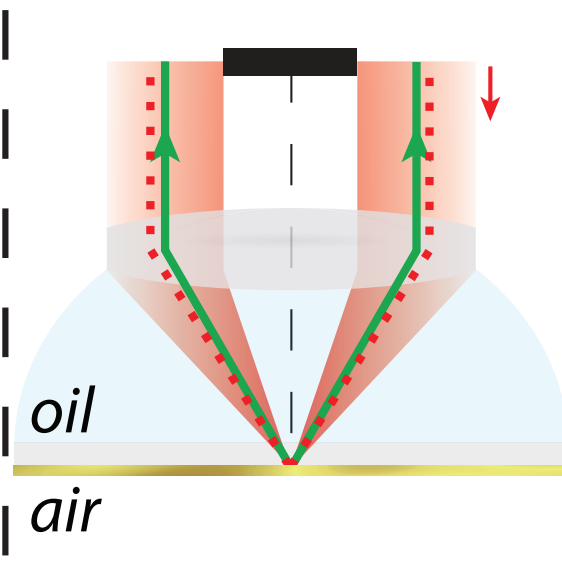

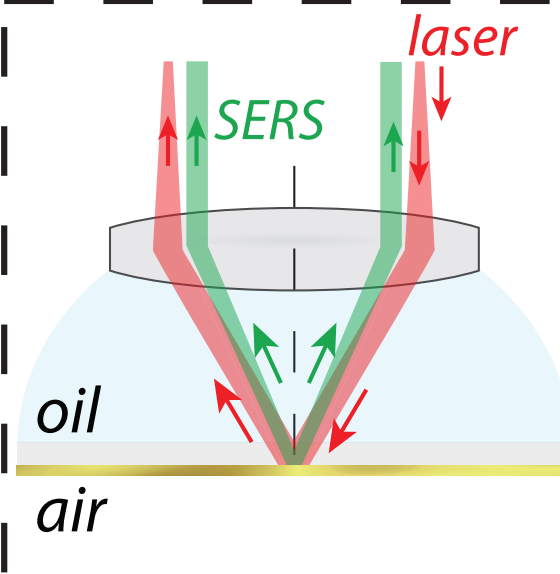

Collecting the cone

Early attempts (1984)

Current strategies
